

PROFESSIONAL EXPERIENCE

< TIME FOR A BIG STEP BACK />

PROFESSIONAL EXPERIENCE

During your learning journey, you have spent a significant amount of time working for one (or several) companies.

It is now time to make this experience as valuable as possible by synthesizing your work into a set of documents, offering numerous learning opportunities for both the present and the future.

You are expected to deliver a full end-of-mission report that contains these points:

- ✓ an **introduction** which is a general description of the area of intervention, of the context and purpose of your mission;
- ✓ the description of the **strategies implemented** explaining the objectives, methodologies and achievements;
- ✓ a **general review** of your production: results compared against initial objectives and specifications, improvement points, new prospects and challenges, ...

You must also present **all the steps and processes implemented during your experience**, whatever they may be, including in particular: requirements gathering, writing specifications (technical and/or functional), validation with the client, project design and its architecture, implementation, testing and quality assurance, delivery, etc.

Base your demonstration on an isolated feature for instance, or a full project, as you fancy.

If you did not witness all the phases of the solution life-cycle, you are allowed to demonstrate the parts in which you participated.
Still, keep in mind that the broader your mission, the richer the experience.
Remember that you're doing this report for you first. To review an experience is to learn from its downfalls and wonders to advance forth!

Feel free to add any useful document to support your report; it may concern:

- ✓ technical aspects;
- ✓ quality assurance;
- ✓ user acceptance;
- ✓ ...

A ridiculously short or an over-diluted report may be hard to defend. Write down every relevant point, nothing more, nothing less; use your common sense.

You must deliver a report written in the official language of your campus.
To easily identify and retrieve files, it is best to name them appropriately. So your submission **MUST** primarily include your First Name and Last Name, optionally followed by the name of your company, using the following format: "firstname.lastname_company"
